No Accidents!

Toolbox Topic:
Over Head
Safety

AVOIDING DROPPED OBJECTS

Prevent tools at height
From being dropped
Use a tool belt

**Tie off portable
Tools with lanyards**
To prevent them falling
On to people below

**Always ensure that
Equipment and tools
Placed at height
Cannot be dislodged**

Success is No Accident!

Look Out-Above and Below

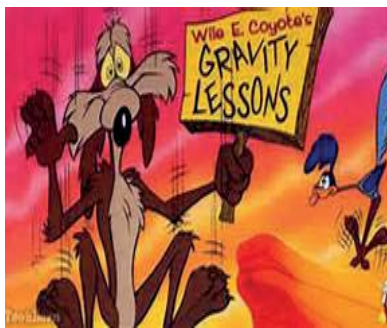

Let's watch out for each other, remind each other to be careful.

Make sure tools and equipment are tied off when working over head.

Objects falling from above and striking people below cause some of the most serious industrial injuries and account for a number of fatalities every year.

. Before raising tools or materials with a hand line or a winch line, make absolutely sure they are securely fastened so they won't slip out.

When you pile materials on scaffolds, make sure scaffolding and platforms are provided with toe boards so objects don't fall off.

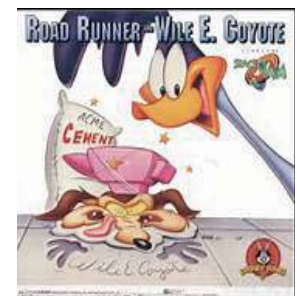

Don't stick tools in your pockets because, when you bend over or reach, they may fall out.

If the nature of the overhead job involves the danger of falling objects, have the area below cleared, and post the necessary warning signs. Rope off the area.

Whether your work takes you overhead or keeps you below, you can eliminate falling objects as a source of danger by following these rules at all times.

Whatever goes up, sooner or later, has to come down. Let's make sure it comes down safely.

Success is No Accident!
